MOHAIB YAQOOB

SENIOR BACKEND ENGINEER | PYTHON · DJANGO · FASTAPI

Riyadh, Saudi Arabia | Transferable Iqama | +966-575461608 | mohaibyaqoob145@gmail.com

LinkedIn: linkedin.com/in/mohaib-yaqoob-447989260 | GitHub: github.com/mohaibbhatti | Portfolio: mohaib-yaqoob.vercel.app

PROFESSIONAL SUMMARY

- Riyadh-based Senior Backend Engineer with 5 years of experience shipping production web applications end to end in Python, Django, FastAPI, and Django REST Framework, with React.js frontend integration. Proven delivery across ride-hailing, banking, e-learning, ETL, and AI-automation platforms, including real-time systems serving 5,000+ concurrent users. Available immediately on a transferable Iqama.
- Skilled in REST API design, microservices architecture, and database optimization, with a track record of supporting real-time systems used by 5,000+ concurrent users.
- Delivered measurable results across production environments: cut API response times by 75%, trimmed database query load by 70% through advanced indexing, and lifted system throughput by 80% via Redis caching.
- Built secure payment and financial platforms handling 1,000+ daily transactions with zero data loss, meeting PCI-DSS and SOC2 compliance standards.
- Experienced integrating third-party platforms such as Salesforce Commerce Cloud, OpenAI, DeepSeek, Twilio, and Firebase; engineered webhook pipelines handling 100,000+ monthly events at under 1% failure rate.
- Based in Riyadh, Saudi Arabia with a transferable Iqama and available to start immediately; seeking a Senior Backend Engineer or Lead Backend Developer role supporting Saudi Arabia's Vision 2030 digital transformation agenda.

TECHNICAL SKILLS

Programming Languages: Python, C++, SQL

Backend Frameworks: Django, Django REST Framework (DRF), FastAPI

Databases: PostgreSQL, MySQL, SQLite, Redis

API & System Design: REST API Design, Microservices Architecture, System Design, API Gateway Design, Webhook Integration

Authentication & Security: JWT, OAuth2, Role-Based Access Control (RBAC), Data Encryption, PCI-DSS Compliance, SOC2 Compliance

Asynchronous & Real-Time Systems: Celery, Asynchronous Task Processing, WebSockets, Real-Time Notifications, Background Job Queues

Cloud & DevOps: AWS, GCP, Docker, CI/CD Pipelines, GitHub Actions, Git, Linux

AI & Third-Party Integrations: OpenAI API, DeepSeek API, Salesforce Commerce Cloud, Twilio, Firebase Cloud Messaging, Jitterbit, Payment Gateways

Tools, Testing & Monitoring: Postman, VS Code, ELK Stack (Logging & Monitoring), Unit Testing, Debugging, Performance Tuning

Methodologies: Agile/Scrum, Code Review, Continuous Integration / Continuous Deployment (CI/CD)

PROFESSIONAL EXPERIENCE

Senior Python Django Developer | MR Corporation, Lahore *Dec 2024 – Feb 2026*

Directed backend architecture for GearUp (vehicle learning platform) and Next Ride (ride-hailing system), designing modular, scalable systems that supported 5,000+ concurrent users.

GearUp – Vehicle Learning School Platform

- Architected a modular Django backend with independent services for users, scheduling, and notifications, enabling rapid feature deployment
- Developed 12+ REST APIs using Django REST Framework with custom serializer validation, reaching a 200ms average response time under peak load (tested with 5,000 concurrent users)
- Constructed relational database models (PostgreSQL) for students, instructors, sessions, and attendance; optimized with select_related and prefetch_related, trimming database queries by 70%
- Engineered a scheduling conflict-detection algorithm that prevented 99.8% of overlapping session bookings, lowering admin support tickets by 65%
- Deployed JWT-based authentication with role-based access control (Admin, Instructor, Student), overseeing 1,500+ active users with zero auth breaches
- Integrated Twilio SMS and Firebase Cloud Messaging for real-time notifications, attaining a 94% delivery rate across 50,000+ daily messages
- Established ELK-based logging middleware to track API requests for debugging, shortening production incident resolution time by 50%

Next Ride – Ride-Hailing Platform

- Designed a scalable backend architecture supporting 2,000+ monthly active drivers and 10,000+ passenger rides
- Built core ride-lifecycle APIs (request, acceptance, start, completion, cancellation) with atomic database transactions, guaranteeing 100% data consistency
- Applied geolocation-based driver matching using the Haversine formula, pairing drivers within a 2km radius in under 300ms at 98% accuracy
- Rolled out a real-time tracking system via WebSockets that refreshed driver location every 5 seconds, handling bursts of up to 8,000 concurrent connections
- Configured payment transaction endpoints with PCI-DSS compliance, settling 500+ daily transactions with zero payment disputes
- Leveraged Redis caching for driver availability data, boosting booking endpoint throughput by 80%
- Resolved edge cases including driver rejection, timeout requests, and ride reassignment, upholding a 99.2% uptime SLA

AI Automation Backend Engineer | Automation Guru (Remote) *Mar 2025 – Mar 2026*

Sell With Bot – AI Automation Platform

Built a multi-tenant Django backend for an AI chatbot automation platform.

- Assembled an API gateway managing 500+ concurrent bot sessions, integrating OpenAI and DeepSeek APIs for conversational AI
- Set up a webhook system for real-time event delivery from external sources, handling 100,000+ events per month at under 1% failure rate
- Developed asynchronous task processing with Celery to handle long-running AI requests, reducing API latency by 40%
- Crafted role-based dashboards for agencies and clients, supporting 150+ active users across platforms
- Structured the backend for horizontal scaling to accommodate multiple concurrent bot instances

Python Django Developer | Webbuggs, Lahore *Nov 2023 – Nov 2024*

Enterprise Data ETL Platform – Salesforce Commerce Cloud

- Formulated and launched ETL pipelines that processed 2M+ records daily, syncing enterprise data through Salesforce Commerce Cloud API integrations
- Delivered FastAPI services exposing processed datasets to internal and external systems, sustaining 99.5% uptime with automated health checks
- Automated data-extraction workflows by connecting Jitterbit sources, shrinking manual data entry by 90%
- Transformed and validated large datasets using Pandas and SQL, verifying 2M+ records daily at under 0.1% data-corruption rate
- Devised retry mechanisms with exponential backoff for failed pipelines, achieving a 99.7% successful data-load rate

Zyggy Bank – Banking Application

- Created the Zyggy Bank backend, a financial transaction engine handling deposits, withdrawals, and transfers via atomic database transactions, processing 1,000+ daily transactions with zero loss
- Introduced card lifecycle management and an audit-logging system tracking 50,000+ monthly financial operations for compliance
- Secured 25+ sensitive REST APIs with validation and encryption, satisfying SOC2 compliance requirements
- Refined database queries for high-volume transactional workloads, cutting query time by 60%

Backend / Python Django Developer | DevFlovv, Lahore *Dec 2022 – Nov 2023*

Scalable Web Application & Backend Platform

- Led backend development and architecture discussions, contributing to the successful design and implementation of 25+ product features
- Collaborated closely with users, development, and QA teams throughout the SDLC, contributing to a 95% testing success rate
- Mentored junior engineers through technical guidance, code reviews, and system-design discussions, helping improve development practices and code quality
- Conducted peer code-review and system-design sessions, contributing to an estimated 25% improvement in coding efficiency and quality
- Developed and maintained backend services using Python, Django, and Django REST Framework, with PostgreSQL as the primary database
- Worked with Celery and Redis for asynchronous/background processing and improved application responsiveness
- Collaborated with frontend developers working with React.js and JavaScript to deliver integrated web application features
- Participated in architecture decisions, technical problem-solving, and continuous improvement across the development lifecycle

Backend / Python Django Developer | Hashed System, Lahore *Nov 2021 – Nov 2022*

Scalable Web Application & Backend Platform

- Developed and maintained a Django and Django REST Framework-based web application, focusing on performance, reliability, and maintainable backend architecture
- Designed and implemented REST APIs and backend functionality using Python, Django, and DRF
- Worked with PostgreSQL for database operations, data modeling, and application data management
- Implemented asynchronous and background processing using Celery and Redis
- Participated in peer code reviews, identifying potential improvements and maintaining coding standards and best practices
- Collaborated in an Agile/Scrum environment, contributing to sprint planning, daily stand-ups, retrospectives, and team discussions
- Worked closely with other developers, including JavaScript frontend work, to troubleshoot issues, improve application performance, and deliver new features

KEY PROJECTS

Personal Portfolio Website – HTML, CSS, JavaScript

Built and deployed a responsive portfolio with an interactive API console, an architecture explorer tied to real project metrics, filterable projects and skills, dark and light themes, and a keyboard command menu. **Live:** mohaib-yaqoob.vercel.app. **Stack:** HTML, CSS, JavaScript, Vercel.

Mazdoor.com – Labour & Home Services Mobile App

Developed a mobile service marketplace concept connecting labourers/service providers with customers seeking work and doorstep services. Core workflows include worker/service discovery, service requests, customer-provider communication, job matching, booking and service management. **Stack:** Flutter, mobile UI, REST API integration, authentication, location/service workflows.

CV Analyzer – ATS Resume Analysis Web Application

Built a web-based CV analysis tool that allows users to upload PDF resumes, preview CVs, run ATS analysis, receive scores and recommendations, and ask questions about the selected resume. The application uses an AI API workflow for resume analysis. **Live:** cv-analyzer-lake.vercel.app. **Stack:** Web application, PDF upload/preview, AI API integration, ATS analysis, Vercel.

Auto Zoom Class Joining – Python (2020)

Python-based software that joins Zoom classes automatically within the time given in the code, saving time and removing the need to join manually.

Bank Management System – C++

Provides customers with a secure and user-friendly platform to manage their finances. Enables them to open accounts, deposit and withdraw funds, and view comprehensive reports for all their accounts.

EDUCATION

Bachelor of Software Engineering | The University of Lahore, Pakistan | Feb 2019 – Feb 2023

CERTIFICATIONS & PROFESSIONAL DEVELOPMENT

- AI Training Hackathon — LAU Academy of Continuing Education, in partnership with Kanz AI and the Saudi Ministry of Human Resources and Social Development — Jul 2026
- Build with AI Agent Builder Camp — GeeksforGeeks x Google for Developers — Jun 2026
- Cyber Security and Ethical Hacking — The Cyber Sol — Dec 2022
- Internet of Things (IoT) and Arduino — The Cyber Sol — Nov 2022
- Full Stack Web Development — Zai Systems (SMC-Pvt) Ltd — Dec 2022

LANGUAGES

English (Professional) | Urdu (Native)

AVAILABILITY & VISA STATUS

Currently job-hunting in Riyadh, KSA. Transferable Iqama. Available to start immediately.
